

HYPERION System Workflow Architecture

Executive Summary: Hyperion ingests enterprise telemetry, detects anomalies, simulates mitigation, executes API actions, and updates operators.

Stages:

1. Scout: ingest telemetry, compute anomaly score, trigger alerts.
2. Strategist: simulate scenarios, rank mitigations.
3. Tactical: execute API/webhook actions.
4. Commander: supervise, voice overrides, update dashboard.

Workflow:

Telemetry -> Scout -> Severity Check -> Strategist -> Tactical -> Commander -> Dashboard.
